Cindi – I cannot recall where that came from. My thoughts is perhaps we referenced the mixing zone modeling work conducted by the operators in their mixing zone application to EPA? I did a quick search of the admin record and cannot locate the report, but the MZ application with the following bate stamp: 022793-022841 might be it??

I am sorry I cannot be of further help.

Could you tell me the RTC number where this is discussed? That would help me determine which report we are talking about.

Thanks,  
Hanh

Hanh,

Do you know if the “Sea Water Dispersion Modeling results” is a report or is it just results from the modeling? The RtC references the results but I didn’t see a document in the record with this title.
